Mrs. Chandima Wadasinghe, Senior Assistant Librarians of the PGIM, coordinated the event.

How to avoid Plagiarism

What is plagiarism?

According to the Merriam-Webster dictionary, the verb “to plagiarize” means:

“to steal and pass off (the ideas or words of another) as one’s own : use (another’s production) without crediting the source”

The term "steal" is included in this definition because it refers to cases in which someone else's ideas or words are purposely used without crediting the source. Because your work attempts to "pass off" another's work as your own, even accidentally borrowing another's ideas or phrases without proper citation falls under this criteria.

Why should you avoid plagiarism?

As a writer, you must avoid plagiarism at all costs because it jeopardizes your credibility. It could cost you significant professional references and potential job growth, in addition to losing the respect of your mentors and peers.

Four ways to avoid plagiarism

Quoting

Quoting means copying a piece of text word-for-word. The copied text must be introduced in your own words, enclosed in quotation marks, and correctly attributed to the original author. To quote correctly, be sure to:

- use quotation marks
- copy the exact words
- give reference details, including the page/paragraph number.

Paraphrasing

Paraphrasing means using your own words to explain something from a source. It allows you to give only the most important information from a passage. To paraphrase correctly, be sure to:

- keep the meaning
- change the word order
- change most of the words
- give reference details

Referencing

Every time you quote or paraphrase, you must include an in-text citation (or footnote citation) that identifies

the original author. It often also includes the publication year and a page number. Each in-text citation must correspond to a full reference in the reference list or bibliography at the end of your paper. This details exactly where the information came from, allowing your readers to locate the source for themselves. There are many different citation styles, and each one has its own rules for citing. Some of the most common include APA, Vancouver, Harvard. The most important thing is to apply one style consistently throughout the text.

APA citation example

In-text citation

Recent research has shown that plagiarism is an increasingly widespread issue

Smith & Thomas, 2018, pp. 34–36

Reference list entry

Smith, T.H., & Thomas, L. (2018). New challenges in higher education. New York, NY: Free Press

To in-text reference correctly, be sure to:

- make it clear which ideas are yours, and which are the author’s
- give the author’s last name
- give the year of publication
- give the page/paragraph number (unless you are referring to ideas presented in the publication as a whole).

Use a plagiarism checker

Before submitting your paper, you can use a plagiarism checker on your own. This can help you spot any places where you've neglected to cite something, omitted quotation marks, or added a paraphrase that's too close to the original text. Then you may easily rectify any instances of possible plagiarism by following the instructions above.

Some phrases or lines may remain with you so well while researching a topic that you mistakenly include them in your work without a citation. If you're unsure, an online plagiarism checker can help you spot these errors before you submit your paper.

PGIM

PUBLICATIONS

Annotated Bibliography of Theses and Dissertations Presented to PGIM by Postgraduate Trainees 2016 - 2019

This issue will be the 5th updated publication which will be available online for easy access. The PGIM, Colombo is the sole institution, which provides postgraduate training in all medical disciplines. One common feature of all these degree-awarding programs is the emphasis laid on research. Inclusion of a research project, culminating either in a dissertation, thesis or research publication is thus a ubiquitous feature of all these programs. Not all research conducted is published and hence this Bibliography will serve as a useful tool in the search for literature especially in relation to recent and locally conducted research.

PGIM RECOMMENDED READING MATERIALS

This compilation contains recommended learning resources for the PG trainees recommended by each Board of Study of the PGIM. It contains books, journals, and useful websites. It is hoped that this compilation functioning as an online catalogue to the PG Trainees will also serve as an extremely useful bibliographic tool to obtain an up-to-date account of developments in the practice of medicine.
